

LIGHT RAYS

Light rays are made of many waves of light energy. The separate waves are too small to see – you just see the light shining.

Make these animal shadows with your hands! This works best in a dark room with just one light shining onto a plain wall.

DUCK

RABBIT

DOG

Light rays can't bend around things, so this leaves a dark area of shadow where the light can't reach.

Light rays can zoom through air, water or even empty space.
